Sriganesh Srinivasan

Boston, MA | 978-930-5615 | ganeshvasan14@gmail.com | github |linkedin |portfolio|Available to start: May 2027

EDUCATION

Northeastern University Boston, MA
Bachelor of Science in Computer Science; Concentration in AI Graduation expected May 2027 - GPA: 3.67/4.0

WORK EXPERIENCE

Fenwick & West Boston, MA
AI Data Engineer Intern June 2026 – August 2026

- Engineered a RAG data pipeline on Databricks integrating iManage DMS to retrieve files and Intapp Walls for compliance with foundation AI model endpoints to generate AI query-ready contract briefings from unstructured PDFs
- Transformed user pain points into 9 AI automations by connecting 5 service APIs through LLM-driven orchestration
- Developed an LLM-driven email automation agent with 2-minute response times by using multi-source RAG to generate client-specific legal case summaries and using strict guidelines to protect against unauthorized access
- Reduced expense reporting automation execution times by 50% through API parallelization and reusable schema references
- Built a Python ETL pipeline utilizing 3 data sources and custom scoring signals to surface $5M+ in cross-sell opportunities
- Worked with senior engineers to utilize Azure CI/CD for Python automations, enforcing auditable deployments

SimpliSafe Boston, MA
Software Engineer Co-op January 2026 - June 2026

- Worked on the Front-end platform team for the E-commerce website, averaging 52k daily visits with a tech stack based on React, TypeScript, Vite, i18n, Chromatic, Tailwind, TanStack, and AWS
- Completed the migration from Gatsby.js to React Router, leading to a 30% reduction in CI/CD build times and individually reduced and deprecated codebases by 17,000+ LOC
- Led development of a design system by collaborating with designers using Figma and building 3 components and 240+ icons
- Maintained GitHub Actions CI/CD, build tooling, unit/E2E testing, and AWS infrastructure using Terraform across 4 repos
- Won company-wide AI hackathon by building an agentic AI pipeline to automate Jira ticket updates from Zoom transcripts using Ollama and a Jira Cloud API integration layer

Northeastern ITS Boston, MA
Salesforce Developer Co-op January 2025 - June 2025

- Owned end-to-end full-stack development of user-facing features using the Salesforce Lightning Web Component framework to build applications for faculty to manage appointments and process student request data for 47,000+ students in Apex
- Eliminated 300+ items of technical database debt, including fields referenced by over 1M records
- Migrated 20+ legacy Salesforce Classic customizations into Lightning-compatible flows and components

PROJECTS & ACTIVITIES

$20 Blind Draft — Full-Stack Web Game August 2026 - Present

- Built out observability with cookieless PostHog funnels and error tracking with recursive payload scrubbing to measure game completion (~80%) across 6,000+ unique visitors and catch real-browser errors without exposing user session data
- Shipped server-authoritative remote play on Supabase using 4 Deno Edge Functions and 6 Postgres migrations, with row-level security projections that keep the shuffled deck server-side and resolve simultaneous bids
- Wrote 190+ tests across Vitest unit, real-Chromium component, and Playwright cross-device E2E suites, including a randomized simulation that auto-plays 840 full drafts per run, holding 100% line coverage on the game engine
- Automated CI with 4 parallel GitHub Actions jobs booting a live Supabase stack, plus axe-core a11y gates

Scalable Design Participation Lab February 2025 - Present
Research Assistant Boston, MA

- Spearheading the implementation of full-stack user management and auth using Firebase's Identity Access Management
- Building a mobile-first experience for an interactive research map by developing 15+ reusable Vue.js components and composables in TypeScript within a Nuxt.js environment

SKILLS

Languages: TypeScript, JavaScript, Java, Python, CSS, HTML, SQL
Frameworks & Tools: React, Vue, MySQL, REST API, FLASK, WordPress, Netlify, Jira, Salesforce, Scrum, Vite
DevOps & Cloud: Google Cloud, AWS, Firebase, GitHub Actions, Terraform, Grafana, Vitest, Playwright, Docker, Supabase
AI/ML Skills: Ollama, Roboflow, LangChain-style RAG, Claude Code, Cursor, Weights & Biases, Prompt Engineering
